

IN THE CLAIMS:

Please amend claim 7 as follows:

1-6. (canceled)

7. (currently amended) A resin panel comprising:

a resin panel body; and

a film for insert molding used fixed in an injection molding mold arranged on a surface of said resin panel body, said film comprising:

a resin film;

a first binder layer formed on the surface of the resin film;

a printed part formed on the first binder layer; and

a second binder layer formed to seal said printed part in co-operation with the first binder layer, wherein the second binder layer directly contactsing both the printed part, along a surface of the printed part which faces said resin panel body, and the first binder layer, along a periphery of the printed part, wherein the first binder layer, printed part and second binder layer are formed in this order; and

wherein said resin panel body is integrally molded with said film by an insert molding so that a surface of the resin film of said film, at the side on which a printed part is formed, faces an inside of the resin panel, wherein the printed part directly adheres to the first binder layer and to the second binder layer, and wherein the entire printed part consists entirely of ink.

8. (previously presented) The resin panel according to claim 7, wherein said resin panel body is directly adhered to said resin film at an outer side of the periphery of the first binder layer.

9. (previously presented) The resin panel according to claim 7, wherein said second binder layer covers the periphery of the first binder layer to directly adhere to said resin film; and

wherein said resin panel body directly adheres to said resin film on an outer side of the periphery of said second binder layer.

10. (original) The resin panel according to claim 7, wherein said resin panel is a window for automobiles.

11. (original) The resin panel according to claim 7, wherein a material of said resin panel body is the same as that of said resin film.

12. (original) The resin panel according to claim 11, wherein a material of said resin panel body and said resin film is polycarbonate.

13. (previously presented) The resin panel according to claim 7, wherein the periphery of the second layer is printed to overlap the periphery of the first layer.

14. (previously presented) The resin panel according to claim 7, wherein the printed part is coated along the periphery of the insert film.

15. (canceled)

16. (canceled)

17. (previously presented) The resin panel according to claim 7, wherein the printed part is one or a combination of more than one selected from the group comprising:

a blackout;

a pattern as a sunshade;

a conductive linear pattern of anti-fogging heat wires;

a conductive linear pattern of ice-melting heat wires;

a conductive linear pattern of antennas for a radio; and

a decorative pattern.
